

Designing Your Dream Garden

Your Space to Unwind Perfectly Tailored to Your Lifestyle
From Vision to Reality – Full Service Execution

LAURABELLA EDEN
BOUTIQUE

MORE THAN A GARDEN. AN INVESTMENT IN EVERYDAY COMFORT.

Let your surroundings flourish.

Your home is your haven, but the garden is where you truly unwind. A well-designed outdoor space is not an expense - it is a value that grows with every passing year.

Treat this brochure as an inspiring starting point. The visualizations presented here are my original digital sketches, created to capture the essence, atmosphere, and potential of various styles. They are not rigid templates, but rather a foundation for creating a unique space on your property.

As an independent designer, I blend aesthetics with functionality to offer tailor-made solutions:

- The elegance of *modern gardens* and innovative *vertical gardens*.
- Unique *Miyawaki pocket forests* and natural *woodland gardens*.
- The warmth of *cottage gardens* and the biodiversity of *wildflower meadows*.
- Specialized *sensory gardens* - therapeutic spaces designed to support calm and focus (especially beneficial for individuals with *ADHD and on the autism spectrum*).

Your Partner From the First Sketch to the Finished Garden.

Collaborating with me guarantees peace of mind, as I am by your side at every stage - from the very first line on the design to the final completion of the landscaping work. Driven by passion, I personally select the highest quality materials and craft complete, thoughtful planting compositions. I take full responsibility for every detail, ensuring that the initial vision seamlessly and stress-free becomes your reality.

Let's transform your outdoor space into a dream sanctuary that will bring you joy for years to come.

An exceptional home deserves an exceptional setting.

Your home has its own unique character, and the garden should be its natural extension. That is exactly why we completely reject off-the-shelf solutions. We approach every space with a 100% personalized focus, designing landscaping and architecture tailored to your lifestyle. Whether you have a sprawling estate or an intimate urban courtyard - *no space is too small to create your dream garden*.

Take the First Step. Completely Free.

Call to arrange a free, no-obligation on-site consultation. During our meeting, *we will uncover the potential of your space together* and find the best direction to turn it into your private sanctuary.

Inspiration is worth sharing. Do you know someone - family, friends, or neighbors - planning to upgrade their outdoor space? Please pass this brochure along. Beautiful gardens make for beautiful neighborhoods.

Laurabella Eden Boutique – Nature, Passion, and Design Expertise

A Passion Rooted in Childhood

My relationship with nature is far more than just a profession—it is a lifelong devotion. A fascination with the plant world, born in my childhood, has evolved into a dedicated career. Today, that same primal curiosity and deep respect for nature drive every single project I undertake.

20 Years of Expertise & Subtly Pushing Boundaries

With over *20 years of practical experience*, I have dedicated my career to mastering the art of landscaping. This depth of knowledge allows me to *subtly redefine convention*. I do not disrupt order; instead, I seek fresh definitions for it. I avoid repetitive, catalogue-style solutions in favour of bespoke compositions with a distinct character.

Inspired by the Masters

My design philosophy is a fusion of decades of experience, personal intuition, and inspiration drawn from the world's leading authorities. My work echoes the principles of visionaries such as:

- Piet Oudolf* – A leader in the naturalistic planting movement.
- Beth Chatto* – An icon of ecological planting („the right plant for the right place”).
- John Brookes* – The creator of the „Room Outside” concept, connecting the garden with the home.
- Luciano Giubbilei* – A master of elegance and serenity in the landscape.
- Russell Page* – A classic designer focused on perfect structure and scale.

Complete Service: Design & Build

Our work does not end on paper. We provide a comprehensive *Design & Build service*, taking the weight of implementation off your shoulders. Whether you require a complete garden transformation or a single, stunning flower bed, we turn the vision into reality with meticulous attention to detail.

Beauty Across All Four Seasons

We create gardens with year-round appeal. Drawing on the knowledge of the masters, I select plants to ensure delight through constant change—from spring buds and summer blooms to the picturesque winter structures of grasses and perennials. Your garden will remain a living painting throughout the year.

Education & Spaces for Little Explorers

I believe a passion for nature should be instilled from a young age. If you have children, a key aspect of our design can be a *dedicated educational corner*. I create spaces that are safe yet fascinating for „little explorers”, allowing them to learn about the plant world and observe nature at their fingertips.

Smart Investment & Free Consultation

A beautiful garden must also be a wise investment. My experience allows me to creatively select materials and species that *maximise your budget* without compromising on quality. To help you start this journey with confidence, your initial consultation is completely free.

Coming Soon: Quality Plants at Competitive Prices

Laurabella Eden Boutique is growing. In the near future, we will be expanding our services to include *plant sales*. Our goal is to offer selected, healthy specimens at highly competitive prices, providing you with a convenient source for trusted plant stock

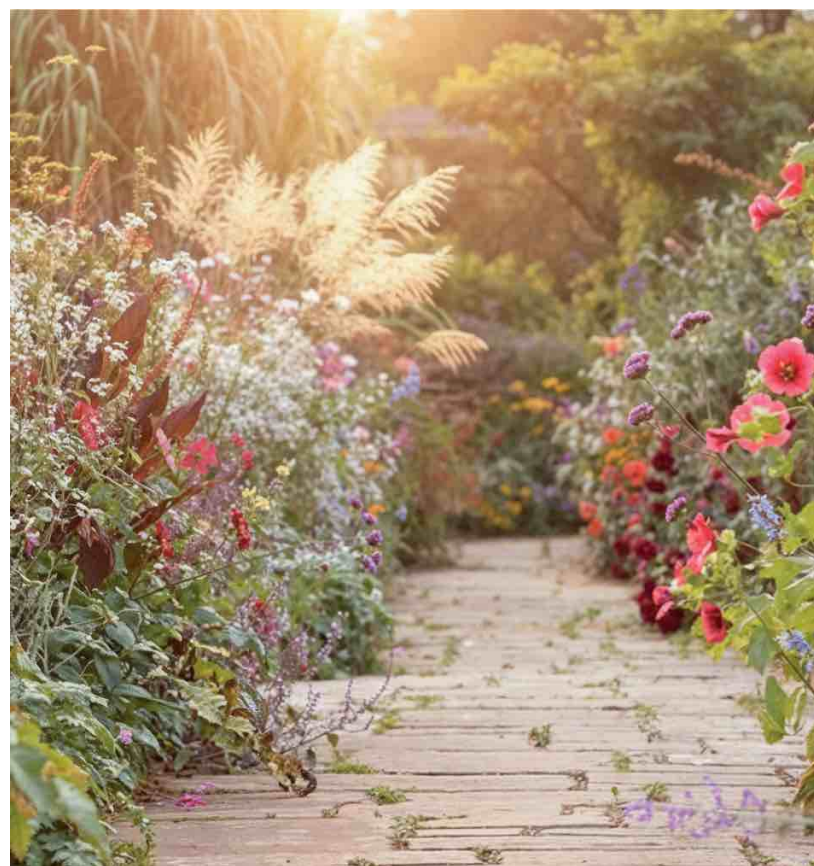

Landscape Impressionism and Biodiversity Engineering

The „Wild Heritage“ collection is an invitation to the world of nature in its noblest, yet fully controlled form. Our concept serves as a unique bridge between generations, combining the sentimental charm of *classic English gardens with modern ecological knowledge*.

Creating this standard required blurring the lines between disciplines — it is a fusion of knowledge from an elite alliance of specialists: from British rosarians guarding the heritage of historic varieties, to Scandinavian permaculture engineers, and landscape architects of the „*New Wave*“ movement. Through this combination, we offer you a space that possesses the *soul of a historic residence and the efficiency of a modern ecosystem*.

A garden in this style is not merely planted — *it is painted with structure and color*, resembling a living canvas. Instead of static, separate flower beds, we create dynamic, multi-layered plant tissues using the „*matrix planting*“ technique.

We masterfully interweave the romantic delicacy of foxgloves and fragrant roses with the architectural austerity of ornamental grasses. The result is an impressionistic landscape that *evolves with the cycle of the seasons*: from a spring riot of pastels to the winter, sculptural forms of frosted seed heads. In this project, we consciously reject the straight line in favor of organic asymmetry — paths meander through lush greenery, building an atmosphere of mystery, intimacy, and deep peace.

Behind this painterly aesthetic, however, lies advanced biotechnology and user convenience. „*Wild Heritage*“ is designed as a largely autonomous system. We select species with „*survival intelligence*“ — plants that, thanks to deep root systems, create a dense underground network. This natural barrier effectively *outcompetes weeds and stores wa-*

ter excellently, meaning that over the years, the garden requires *less and less work and human intervention*. By foregoing sterile lawns in favor of flowering meadows and ground cover perennials, we create a luxurious, vibrant sanctuary that looks as if it has existed there forever — *noble, timeless, and harmonious*.

Feel the Nature close to You

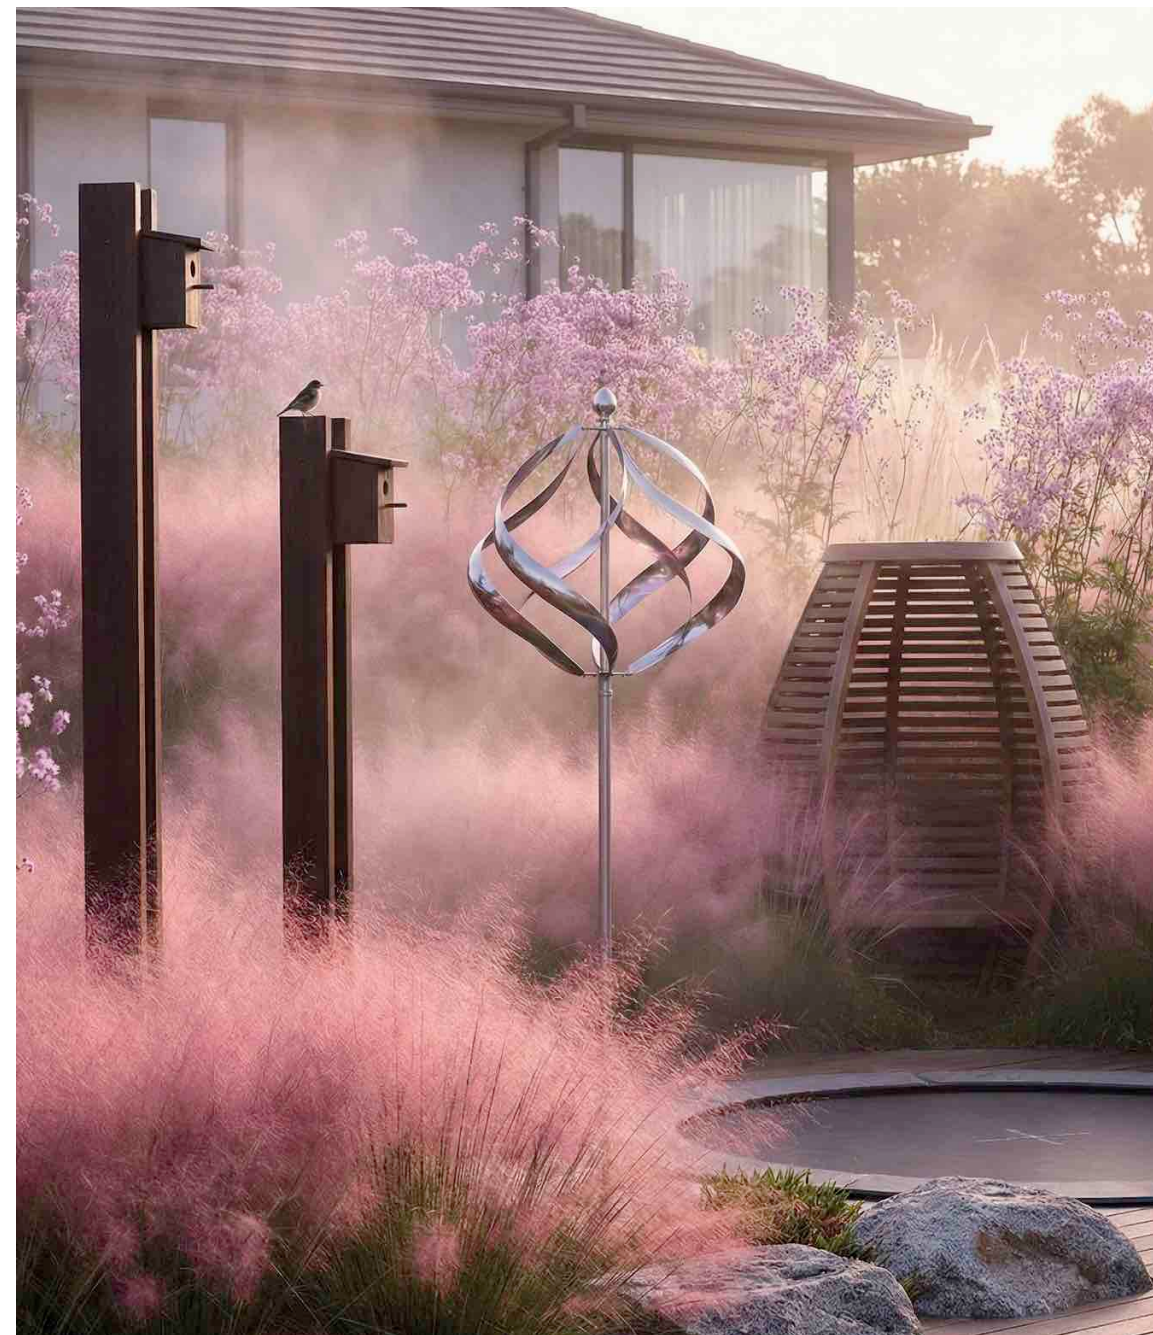

Sensory Garden: „Synesthesia” Standard

Choosing this garden means implementing advanced neuroaesthetic standards, based on our proprietary „**Competence Matrix**.” Drawing from the expertise of world-class specialists in horticultural therapy and environmental psychology, we create a **precise ecosystem** with the primary goal of regulating the users nervous system. We design a space that, through specific textures, colors, and scents, **actively supports regeneration processes**. In terms of acoustics, we approach real urban conditions with engineering precision - rather than making unrealistic promises of silence, **we create biological buffers** using rustling grasses and shrubs that effectively mask intrusive noise, relegating it to a neutral background.

The proven **therapeutic effectiveness** of this standard makes it perfectly suited not only for private residences but also as a key element supporting development **in schools, kindergartens, and public playgrounds**. It's unique differentiator is it's documented impact on neurodiversity. Based on university research, we create environments essential for educational facilities, where contact with such engineered greenery naturally **improves concentration in children with ADHD and soothes hyperactivity**.

Awaken Your Senses to Harmony

Simultaneously, with special care for individuals on the **autism spectrum**, we design zones free from chaos - based on **calming, fractal patterns** and equipped **with safe niches** („cocoons”) that protect against sensory overload. Complementing this is a preventative health aspect for adults, based on the research of Dr. Roger Ulrich - the garden layout induces a physiological relaxation response, **lowering cortisol levels and blood pressure**. The garden in the „**Synesthesia**” standard is, therefore, **a functional, multipurpose therapeutic tool**, serving as an investment in the health capital of the entire community.

Architectural Minimalism & The Geometry of Silence

Our „*Modern Form*” collection is serenity achieved through reduction. While „*Wild Heritage*” celebrates the unpredictability of nature, this concept prioritizes *conscious harmony and disciplined form*. We treat the garden not as a separate entity, but as another room - *a natural extension of the home’s interior*, where greenery becomes a key building material.

In this vision, plants do not grow randomly; they are *curated to create „green architecture.”* We utilize dense blocks of yew or hornbeam to define

spatial frames, and airy ornamental grasses to *add lightness and movement*. This ordered, almost graphic layout serves as the perfect backdrop for art. Openwork wire mesh sculptures or minimalist installations look spectacular here - emerging from a sea of grasses or standing against clipped hedges, they create the atmosphere of a *private open-air gallery*. Here, nature collaborates with design: leaves and stems catch the light, softening raw lines and breathing life into the geometric arrangement.

Open Space & Subtle Palette

In this concept, the *physical boundary between house and garden blurs*, creating a cohesive „open lounge.” Although architectural greenery dominates, we do not forgo blooms - instead, we introduce them in a *sophisticated, muted iteration*. Rather than loud contrasts, we apply monochromatic color drifts: *elegant whites, cool purples, or silvers*. Flowers do not fight for attention here; they act as delicate, jewelry-like additions to the green walls and grasses. The entire composition builds an atmosphere of *quietude and intimacy*, essential for effortless relaxation.

The Architecture of Your Peace

Forest Sanctuary & Nature Engineering

Our Forest Sanctuary concept was designed to provide a sense of sheltered security. A Forest Garden is more than just greenery—it is a private asylum that turns the local climate into an asset. Instead of fighting nature, we curate a multi-layered ecosystem where mosses and ferns transform moisture into lush, green carpets. Dense plantings of trees and shrubs act as a natural screen, protecting your home and patio from the wind, building an atmosphere of coziness and intimacy year-round. It is a space that wraps you in silence, giving a sense of total seclusion from the outside world.

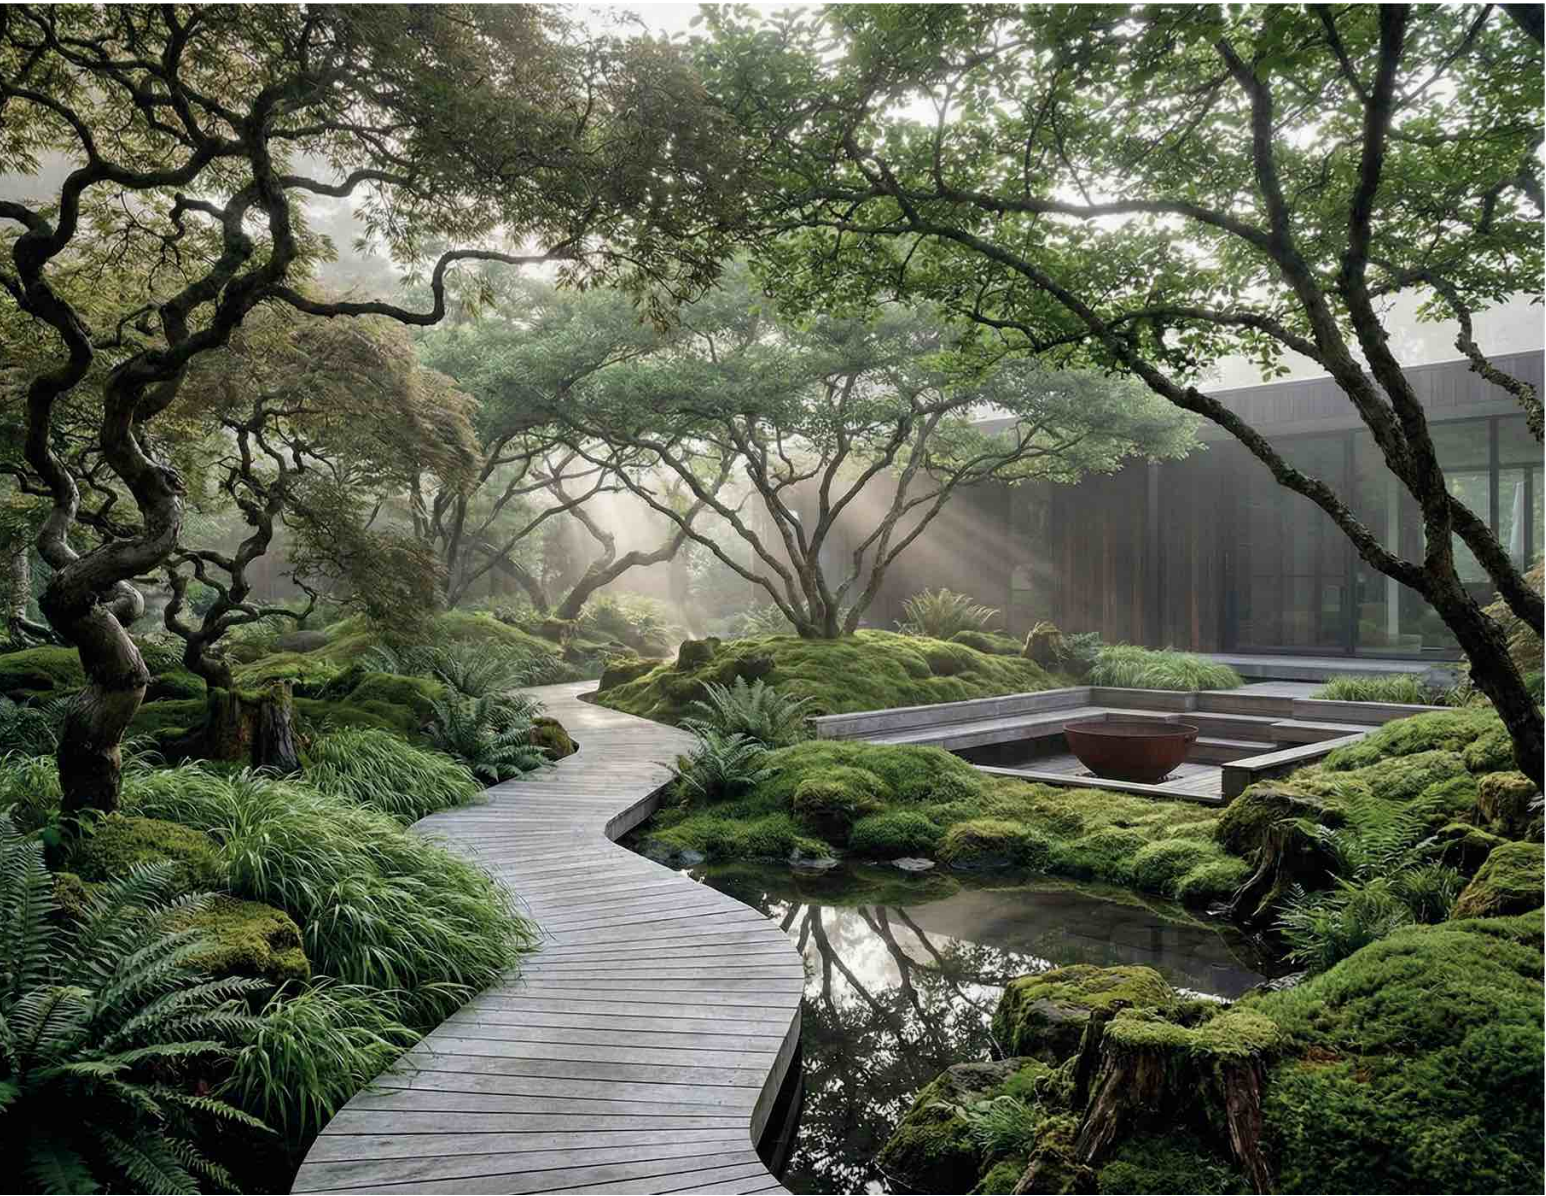

Where space is a challenge—in urban areas, business parks, or residential developments—we implement the Miyawaki Method. This is nature engineering that allows us to create dense „Tiny Forests” which grow 10 times faster than traditional plantations. We transform monotonous lawns—which often become waterlogged in the Irish climate—into self-sufficient biological enclaves. This system not only instantly creates a mature landscape but acts as a sponge, absorbing excess water and serving as a vital piece of modern infrastructure.

The Profit Balance: Why Choose a Forest?

Investing in a Miyawaki forest delivers tangible savings for developers and property managers:

- **Energy Efficiency:** A dense forest buffer acts as thermal insulation, significantly reducing wind chill on buildings (leading to lower heating costs).
- **Property Value Uplift:** The rapid establishment of a „mature garden” look increases the visual appeal and market value of the development in just 3 years.
- **Flood Mitigation (SuDS):** The forest floor absorbs up to 30 times more rainwater than a lawn, preventing surface waterlogging and relieving pressure on storm drains.
- **Zero Maintenance Costs:** After a brief establishment period, the system becomes 100% autonomous - eliminating the ongoing costs of mowing and landscaping services.

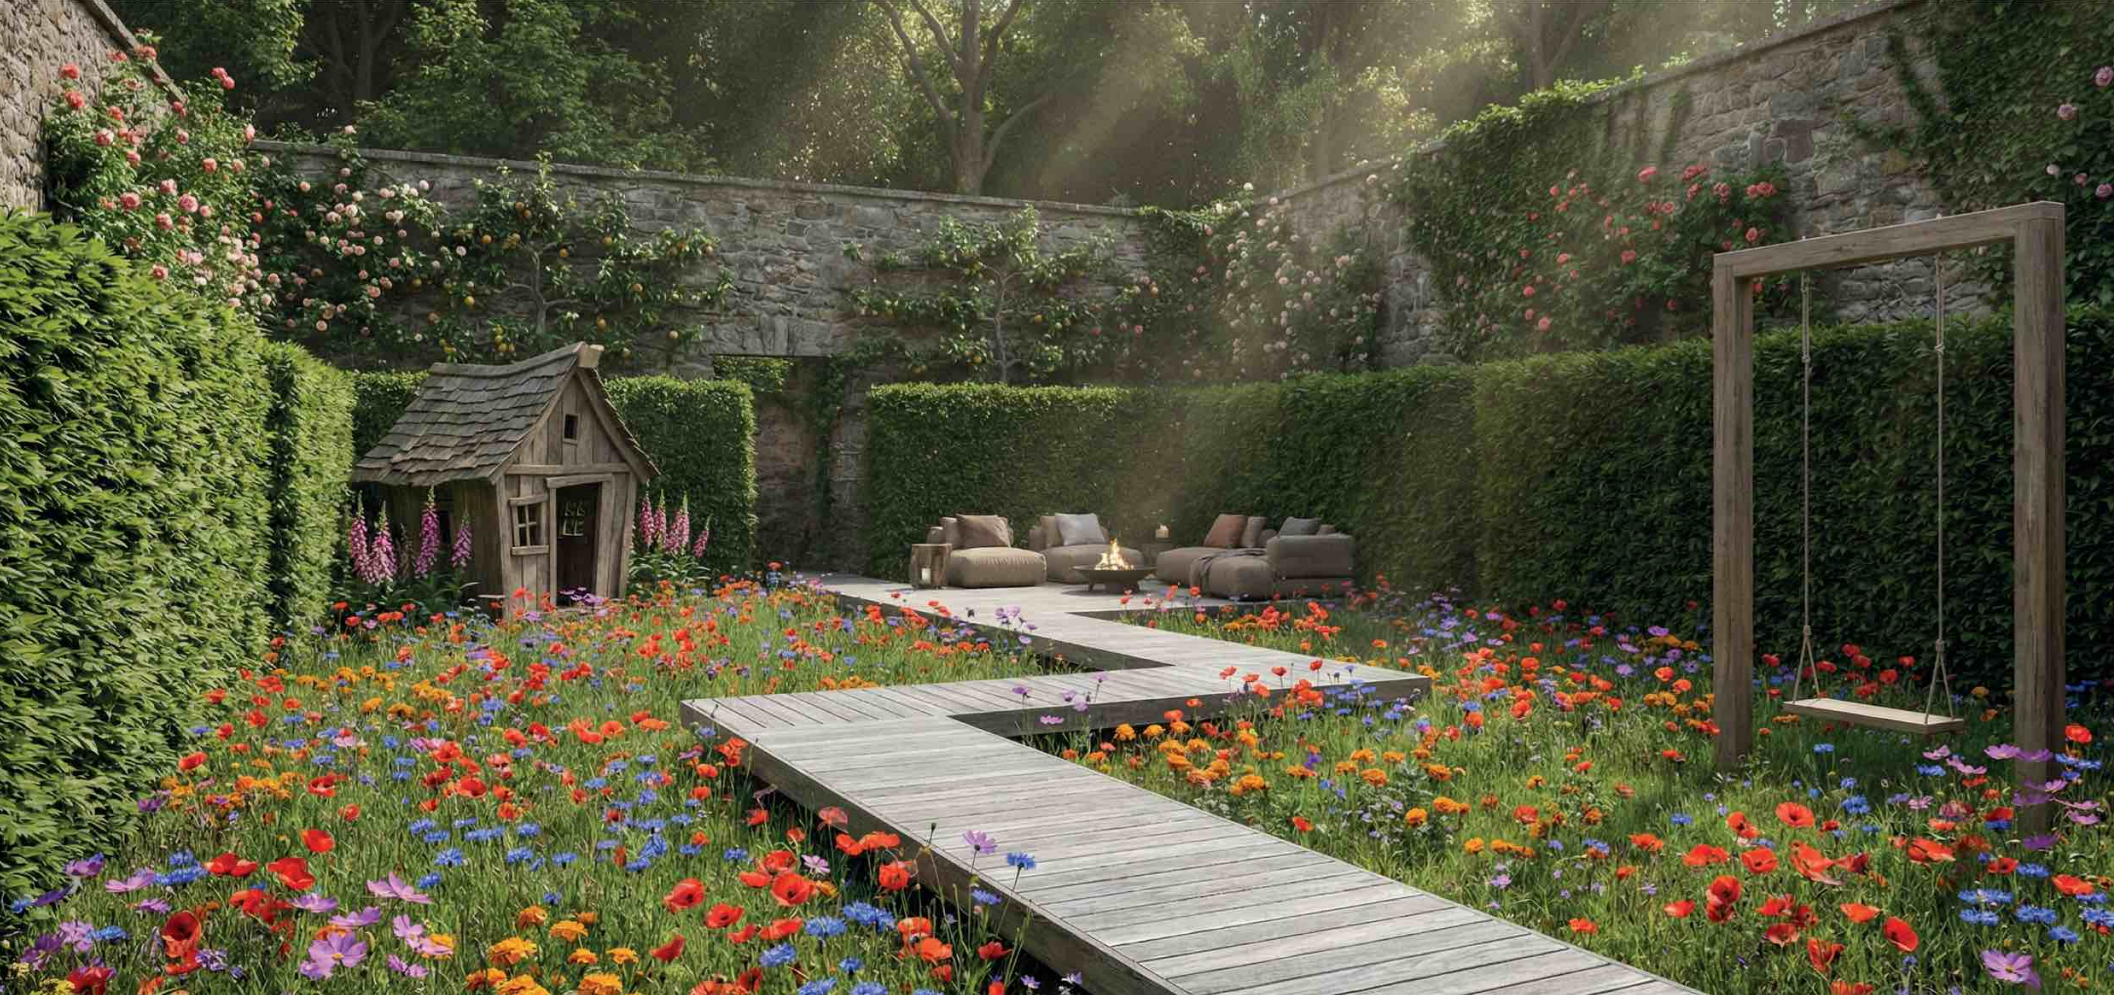

Discover Your Private Refuge

BEFORE: DAY ZERO
(Implementation)

AFTER: Year three
(The Tended Path)

Why is our offer unrivalled?
We utilise the innovative “No Dig” technique

- **Dramatically Lower Installation Costs:** With the “No Dig” method, we eliminate the need for heavy machinery and expensive turf removal. We establish the meadow directly on the existing ground, significantly reducing your initial investment.
- **Time & Fuel Savings:** A traditional lawn requires up to 20 cuts per season. A meadow? Just 1 or 2 cuts per year. This ends the tyranny of the lawnmower.
- **Biodiversity & Education:** Active support for the All-Ireland Pollinator Plan and a perfect, engaging educational tool for schools and families.
- **Climate Resilience:** Undisturbed soil retains structure and absorbs water better (the “sponge effect”), keeping the meadow green and vital even when standard lawns turn yellow or water-logged.

Live in Rhythm with Nature

Living Mosaics & Ecological Balance

We replace the monoculture of sterile lawns with a **vibrant, thriving spectacle**. Our flower meadows are dynamic, ever-changing canvases that **evolve daily**. This concept breaks away from the monotony of static greenery in favour of an impressionistic play of colour, texture, and movement. Our seed mixes - based on native species - are specially curated to bloom sequentially, ensuring **visual appeal from early spring well into late autumn**.

But a meadow is more than just a view - it is a fascinating **outdoor laboratory for the youngest generation**. Unlike an empty lawn, this space awakens a child's natural curiosity. It becomes **a safe haven for nature exploration**, where they can observe butterfly life cycles, the work of bees, and the changing seasons. **This is sensory education in its purest form**: children learn respect for nature and spend **quality time away from screens**, immersed in a world of scent and colour.

The Vertical Dimension of Architecture: Greenery Redefined

In modern design, greenery has evolved from a mere decorative addition into a crucial structural element. Modular vertical gardens are a sophisticated response to the need to integrate living nature into the urban fabric and interior architecture. It is a solution that refuses to compromise, offering both space efficiency and high-end aesthetics.

The elegant, cascading form of the system provides a discreet backdrop for any botanical arrangement. A curated selection of plants—based on

a masterful interplay of textures, volumes, and hues—allows for the creation of a three-dimensional, living facade. An integrated, internal water circulation system ensures optimal hydration, guaranteeing the plants' excellent condition and effortless maintenance. Shortly after planting, the structural framework seamlessly disappears, giving way to a purely organic form.

This is a harmonious fusion of modern design and nature, delivering tangible value to diverse audiences:

The Investment Perspective: Solutions for Business and Developers (B2B)

Integrating vertical systems into commercial spaces and development projects is a strategic decision that builds the brand image and tangible value of an investment:

- **The Hospitality Sector and Relaxation Zones (HoReCa):** Living walls are an unrivaled tool for arranging outdoor patios, pub gardens, or designated smoking areas. They create natural, aesthetic visual and acoustic barriers, transforming challenging spaces into exclusive, green enclaves. The presence of living plants noticeably elevates the prestige of the venue and the comfort of its guests.
- **Increased Investment Value and Prestige:** Plant installations on loggias, terraces, or in representative entrance zones constitute a unique market differentiator, elevating the standard and visual appeal of any property.
- **Maximization of Usable Space:** The vertical orientation of the system allows for the introduction of an intensive plant layer without encroaching upon the valuable floor space of commercial premises or apartments.
- **Architectural Cohesion and Ecological Standards (ESG):** Modularity allows for the seamless replication of the layout across expansive areas, maintaining the purity of form. Simultaneously, the biologically active surface supports efforts toward sustainable building certifications by optimizing the local microclimate.

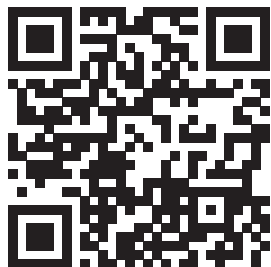

The Private Perspective: Solutions for Individual Clients (B2C)

For those seeking harmony in their immediate surroundings, vertical gardens provide a tool to create private zones of tranquility and relaxation, regardless of the available square footage:

- **A Private Enclave of Serenity:** The system allows even the most compact city balcony to be transformed into an intimate, green oasis, isolating you from the hustle and bustle of the city.
- **An Evolving Composition:** A living wall is a highly dynamic spatial element. By adjusting the arrangement of seedlings, the user creates a personalized installation whose character and color palette change with the rhythm of nature and the passing seasons.
- **Effortless Maintenance:** The intuitive construction of individual modules, combined with an intelligent water retention and distribution system, makes maintaining the arrangement in pristine condition a relaxing experience that requires no specialized botanical knowledge.
- **A Natural Microclimate:** The plant barrier stabilizes air humidity, acting as a natural filter and acoustic screen, radically improving the quality of daily leisure.
